1 Frequently asked questions

1.1 General

Why doesn't a student's balance change when they send a screenshot?

A screenshot can be edited and proves nothing about the college's bank account. The claim is recorded as *Under review* and does not touch the balance. When the matching bank line arrives in the next statement import, it links to the claim by its UTR, even if the student typed the UTR as plain digits. Once that money is allocated and posted, the balance changes.

Why doesn't the system allocate a payment when the payer's name matches a student exactly?

Names are not unique, and parents often share a name with another student's parent. A name or phone match makes the student a *candidate* with a confidence level, never a match. Someone has to record what proves the link, such as a remittance advice or a guardian confirmation from the registered number, before the payment can be proposed.

Why does a matched payment still need a person?

The fee component (Admission or Tuition) is not stated on most payments, and the application does not guess it. Once Finance approves an allocation order, policy AA-1 can be switched on and matched payments will post automatically.

Can the same person propose and approve if they are in a hurry?

No. The rule is applied to the individual user, not the role, so a Finance approver who proposes an allocation cannot approve it. The same applies to requesting and approving a correction, and to reporting and verifying cash. Ask another Finance approver.

Can I delete a wrong entry?

No. Nothing that touches money is ever deleted. A wrong posting is fixed by a correction, which writes a compensating entry, cancels the receipt with the reason and frees the money to be allocated again. The original line stays visible, and both people are in the audit log.

What does "control difference ₹0" mean?

Every rupee of verified money must be in one of three places: posted to a ledger, awaiting approval, or not yet allocated. The control difference is verified money minus those three. Any value other than ₹0 means money has been counted twice or lost, so it is shown on the Overview and in the reconciliation export.

1.2 Payments and imports

What happens if I import the same bank statement twice?

Nothing new is added. Each line is checked by source and transaction ID, ignoring case, spaces and punctuation. Repeats are counted as *duplicates skipped* and are never money.

A bank line has the same ID as an earlier one but a different amount. What do I do?

It shows as *Same ID, different amount* and is not counted as money. Ask the bank which line is correct, then open it and click **Keep ... and close** with what the bank said.

One payment covers two students. How do I split it?

Open the payment and use **Add line** in the Allocate panel to give each student a line. If the bank remark already says `S101 15000 / S104 15000`, the lines are filled in for you. Both lines are approved together, and each student gets one receipt.

A payment arrived before the student was registered. What happens?

It shows *Reference not in student system*. Once the student is registered, click **Retry student lookup** and it is matched.

A student paid more than the fee outstanding. Can it be posted?

Yes, but the Finance approver must write in the approval note how the extra money is treated, for example a credit to next term. Without the note the approval is refused.

1.3 Cash, reversals and corrections

Why can't the counsellor who collected the cash verify it?

Verification is the check that the cash really reached the bank. If the person who reported it could verify it, there would be no check. Only Finance can verify cash, and never the same person who reported or evidenced it.

The bank reversed part of a payment. Does the original change?

No. The reversal is a separate negative entry linked to the original. The original keeps its full amount, the receipt is marked *Adjusted*, and the student's ledger shows the reversal as its own line.

A reversal is larger than what is left on the original. What now?

It shows as *Reversal exception* and cannot be applied. Confirm with the bank, then click **Re-check link to original** if the link was wrong, or **Close without applying** with a note.

1.4 Reports and audit

Where is the day's reconciliation report?

Audit log → Export reconciliation (CSV), available to Finance and administrators. It has one row per payment, and the control difference is shown at the foot.

How do I prove the audit log has not been edited?

Click **Verify integrity** on the Audit log. Each entry carries a fingerprint of the previous one, so any edited or deleted entry breaks the chain and is named.

2 Troubleshooting

2.1 Starting and signing in

Problem	Cause	Fix
`start.bat` says the ASP.NET Core 8 runtime is not installed	The runtime is missing	`winget install Microsoft.DotNet.AspNetCore.8`, open a new window and run `start.bat` again
`start.bat` closes at once, or `app\FeeReconDesk.dll` is not found	Running from the Git source, which has no built `app` folder	Install the SDK and run `build.bat` first
Admin password ignored in the console	The password did not meet the rules	Run `start.bat` again with at least 10 characters and three of upper case, lower case, digits and symbols
Admin password unknown	—	Run `start.bat` and type a new password at the prompt
Demo password lost	It is shown only once	Sign in as `admin` and **Reset password** for each demo account
Browser shows "can't reach this page"	The console window was closed, or the app failed to start	Run `start.bat` and read the console message
Another program is using port 5090	Port conflict	Change `Urls` in `appsettings.json`, for example to `http://localhost:5091`
"Too many requests" at sign-in	More than `LoginAttemptsPerMinute` attempts from one address	Wait a minute, or raise the limit if many staff share one office address
"Too many failed attempts"	5 wrong passwords	Wait 10 minutes, or an administrator clicks **Reset password**
"Your session ended"	Idle timeout, or your role or password changed	Sign in again
"Security check failed. Reload the page"	The page was open across a restart or sign-out	Reload the page

2.2 Imports

Problem	Cause	Fix
Rows rejected	Missing transaction ID, text or zero in the amount, or more than ₹10 crore	Correct those rows in the CSV and import again. Rows already imported are skipped as duplicates.
"Missing required columns"	No `TransactionId` or `Amount` column	Rename the bank's columns. `UTR`, `Narration`, `Remitter` and `Mobile` are also recognised.
"File too large" or "Too many rows"	More than 5 MB or 20,000 rows	Split the statement into smaller files

Problem	Cause	Fix
Every row is a duplicate	The file was already imported	Nothing to do
No **Import bank statement** option	Only Finance can import	Ask a Finance reviewer or approver

2.3 Allocation and approval

Problem	Cause	Fix
Propose allocation is disabled	A check in the list is red	Read the red item: usually a missing component, a missing reason, or lines totalling more than the unallocated money
"... has no verified identifier on this payment"	The student is a name-only candidate	Fill in **Corroborating evidence**
"This payment changed while you were editing"	Another reviewer acted on it first	Reload the record, check it and propose again
Approve and post is disabled	You proposed it, or you are not a Finance approver	Ask another Finance approver
"Funds changed after this proposal"	A reversal or another posting changed the free amount	Reject the proposal and propose again
Stuck on *Posting failed — retry*	The student system did not answer; in sample data, the demo timeout policy may be on	Click **Retry posting**. It never posts twice.
Cash cannot be allocated	It is not verified yet	Finance verifies the deposit first

2.4 Data

Problem	Cause	Fix
The app will not start and says the data file could not be read	The data file is damaged	Close the app, rename `fee-recon-desk.json`, and rename `fee-recon-desk.json.bak` to take its place
Everyone has to sign in again after a restore	The `keys` folder was not restored	Restore the `keys` folder with the data file next time. No data is lost.
Need to start completely fresh	—	Close the app and rename the `app/data` folder. A new empty book is created on the next start.
Control difference is not ₹0	This should never happen	Stop work, export the reconciliation CSV, run **Verify integrity** and **System check**, and contact support with both files
